TikTok Hiring Team

Re: User Operations Specialist, Platform Responsibility — San Jose, CA

Dear TikTok Hiring Team,

I am writing to apply for the User Operations Specialist position on the Platform User Operations team. Supporting platform users is my daily work: at Outlandish, a TikTok Shop agency, I build the company's internal platforms and provide frontline support for them, handling 10–30 inquiries a day from internal teams and external partners over chat and internal channels — diagnosing issues, following up to confirm resolution, and running regular reviews that turn recurring problems into process and product fixes. With prior roles at TikTok and ByteDance, I also bring exactly the mobile-video platform familiarity this position calls for.

What I like most about support work is closing the loop. When an account manager reports a data discrepancy or a tool breaks mid-campaign, I trace the problem to its root — a pipeline failure, a data-entry pattern, a missing validation — fix it, confirm with the user that it is actually resolved, and then decide whether it should become a permanent improvement. That habit has concrete results: I automated a ~250-hour-per-month manual reporting workflow into a daily pipeline with QA and validation checks, and my role-based dashboards and internal training cut repetitive inquiries substantially. Under pressure, the same skills hold up — at a live event with 5,000+ TikTok creators, I ran real-time technical support on-site for the check-in platform I had shipped, helping cut queues from four hours to twenty minutes.

My technical toolkit matches the requirements directly: SQL with joins, CTEs, and window functions; Excel formulas; and Python with pandas and numpy, all used daily — at TikTok I analyzed 5M+ playlist records with SQL and Python, and built self-service Tableau dashboards that reduced ad-hoc data requests by 70%. I have also worked on the platform-responsibility side of the ecosystem: as a Product Operations intern at ByteDance, I designed content governance systems that used moderation data and behavioral signals to proactively flag policy-violating content, cutting high-risk exposure 12%. And I have partnered with engineering from the user side of the loop — at TikTok, I diagnosed failure points across QA, ETL, and model filters to unblock a migration pipeline that scaled throughput 400x.

Practical fit matters for this role, so let me be direct: I live in the Bay Area, so San Jose requires no relocation; I am comfortable with early-morning, evening, and weekend shifts on a rotating schedule; and as a native Chinese and fluent English speaker, I can support users and collaborate with teams across both US and China time zones — often exactly when those shifts fall.

Thank you for your time and consideration. I would welcome the opportunity to discuss how I can contribute to the Platform User Operations team.

Sincerely,

Belle He
