AppLovin Hiring Team

Re: Growth Analyst, Consumer Growth Operations — Palo Alto, CA

Dear AppLovin Hiring Team,

I am writing to apply for the Growth Analyst position on the Consumer Growth Operations team. I am a data analyst at Outlandish, a fast-paced TikTok Shop agency, where I own campaign performance measurement for 300+ brands, and I previously worked in data and product roles at TikTok and ByteDance. The core of this role — defining success metrics, monitoring daily performance for anomalies, and working with partners and platforms to make measurement trustworthy — is precisely the work I do every day, and I would love to bring it to the scale of AppLovin's advertising platform.

At Outlandish, I built the company's single source of truth for campaign performance: I defined the success metrics (GMV, video performance, per-campaign P&L) used by our C-suite, account teams, and clients, and turned a ~250-hour-per-month manual reporting workflow into a daily pipeline with validation checks. Monitoring that pipeline means catching anomalies early — a metric shift in a brand's campaign gets investigated and explained the same day. When measurement depends on external platforms, I work directly with their data: I integrated the TikTok API, Eventbrite webhooks, and AI-vision parsing of GMV screenshots to build the measurement backbone for a 5,000+ creator live event, and resolved the data-quality issues that surfaced along the way.

My earlier roles sharpened the technical foundation this position calls for. At TikTok, I queried and analyzed 5M+ playlist records in SQL and Python with profiling and validation checks, ran A/B tests to validate product changes, and diagnosed failure points across an ETL pipeline that, once restructured, scaled throughput 400x. I also learned to communicate findings to very different audiences — engineers, designers, editors, executives, and non-technical client teams — through self-service dashboards that cut ad-hoc data requests by 70% and through weekly insight reports that changed how editorial teams worked.

What draws me to AppLovin specifically is the chance to apply this measurement discipline to mobile advertising at global scale. My experience sits in creator commerce rather than ads, but the fundamentals transfer directly: attribution-style tracking of which touchpoints drive conversion, tiering and scoring models built on performance data, and the daily rigor of keeping metrics honest when revenue decisions depend on them. I am eager to develop deep expertise in AppLovin's product suite, and as a Bay Area resident I am fully available for onsite work in Palo Alto.

Thank you for your time and consideration. I would welcome the opportunity to discuss how I can contribute to the Consumer Growth Operations team.

Sincerely,

Belle He
