AppLovin Hiring Team

Re: Associate Product Manager, Ads Organization — Palo Alto, CA

Dear AppLovin Hiring Team,

I am writing to apply for the Associate Product Manager position in the Ads Organization. I build AI-powered products at Outlandish, a fast-paced TikTok Shop agency, where I own an internal product portfolio end to end — from scoping the problem with business teams to launch, pilots, and post-launch KPI measurement. Before that, I was a Product Manager intern on TikTok's Effect Creation Tools team, shipping creative-workflow products for millions of creators. A role that spans creative workflows, campaign tools, experimentation, and SQL-driven analysis — without feature silos — is exactly the way I already work.

At Outlandish, my products are how the company runs its business. I designed and launched an AI-guided planning tool that converts campaign performance data into each brand's monthly creator strategy and GMV targets: I piloted it with a small group of Account Managers, iterated on their feedback, and rolled it out across 300+ brands, cutting the planning cycle from about a month to seven days. I launched a Creator CRM from zero that now manages 44,000+ creators and their campaigns, built an LLM-based recommendation engine that turns one-off collaborations into repeat partnerships, and scoped third-party integrations — the TikTok API, Eventbrite webhooks, AI vision — into an event platform that cut check-in queues from four hours to twenty minutes for 5,000+ creators. Behind every one of these sits my own SQL and Python analysis: I built the company's single source of truth for campaign performance and use it daily to find product gaps and measure what we ship.

My TikTok experience maps directly to the creative side of this role. I spearheaded a 0-to-1 effect asset library — 4,000+ categorized assets launched with engineering, design, ops, QA, and legal — that lifted submission penetration 38% and per-user content creation 55%. As PMF owner I refined the value proposition through A/B tests and creator interviews, and I unblocked a migration pipeline by diagnosing failures across QA, ETL, and model filters, scaling throughput 400x. I have seen what makes creative tooling succeed with the people who use it, and I understand the operational plumbing underneath.

AppLovin appeals to me because it pairs the two things I care most about — AI-driven products and measurable business impact — at a scale I have not yet worked at. My advertiser-facing instincts were built in creator commerce rather than mobile ads, but the fundamentals carry over: campaign tools live or die on whether they save operators time and make performance legible, and pilots plus honest metrics beat opinions. I work comfortably with a high degree of autonomy, and as a Bay Area resident I am fully available for onsite work in Palo Alto.

Thank you for your time and consideration. I would welcome the chance to discuss how I can contribute to the Ads Organization.

Sincerely,

Belle He
