TikTok Hiring Team

Re: Product Operations Manager, TikTok LIVE — Los Angeles, CA

Dear TikTok Hiring Team,

I am writing to apply for the Product Operations Manager position on the TikTok LIVE team. Growing a creator ecosystem with data is what I do every day: at Outlandish, a TikTok Shop agency, I manage and grow an ecosystem of 44,000+ TikTok creators — segmentation and GMV-based tiering, creator education and training, campaign management, and ROI analysis. Having also worked inside TikTok and ByteDance, I know this ecosystem from both the platform side and the agency side, and I would love to bring that combined perspective to TikTok LIVE.

The responsibilities in this role mirror my current work closely. I formulate growth strategies by creator segment: I designed an AI-guided planning tool that converts campaign performance data into each brand's monthly creator strategy and GMV targets, now used across 300+ brands. I define the success metrics for our creator business — I built the company's single source of truth for campaign performance, with per-campaign P&L that powers our post-campaign reviews and ROI analysis. And I work on ecosystem health directly: my creator recommendation engine matches proven creators to the right brands, converting one-off collaborations into repeat, long-term relationships. For the Social Commerce Festival, a live event connecting 5,000+ TikTok creators with brands, I directed creator-facing operations end to end, from creator training and on-site support to the check-in and tiering platform I shipped for the event.

I have also sat on the product side of the creator feedback loop this role partners with. As a Product Manager intern on TikTok's Effect Creation Tools team, I was PMF owner for the next-gen effect asset library: I ran creator interviews and A/B tests, translated what creators needed into product decisions, and launched 4,000+ assets that lifted per-user content creation 55%. Earlier, as a Product Operations intern at ByteDance, I ran creator growth programs — education, one-on-one coaching, and submission campaigns — that are, in miniature, the educational programs this role calls for. My data toolkit (SQL, Python, Tableau) means I run my own analyses rather than waiting on a data team, and as a native Chinese and fluent English speaker I collaborate easily across global and China-based teams.

TikTok LIVE is the part of the ecosystem where creator livelihoods and platform health are most tightly connected, and that is exactly the kind of problem I want to work on. My creator-economy experience comes from commerce and content rather than livestreaming itself, but the mechanics — tiering, education, matching, and honest ROI measurement — transfer directly. I am based in the Bay Area and fully prepared to relocate to Los Angeles for this role.

Thank you for your time and consideration. I would welcome the opportunity to discuss how I can help TikTok LIVE's creator ecosystem grow.

Sincerely,

Belle He
