Dear Lambda team,

Your posting describes the gap between what leadership needs to see and what teams can easily report — dashboards built by hand, workflows stuck in spreadsheets, tooling requests piling up. Closing exactly that gap has been my day job for the past year, and I'd love to do it at Lambda.

At Outlandish, a TikTok Shop agency serving 300+ brands, I own the internal tools and data products the whole company runs on. Three examples that map directly to this role:

- **Manual reporting → trusted data products:** account executives were hand-copying GMV and ad-spend into spreadsheets, with frequent errors. I replaced it with automated API data feeds into live dashboards — eliminating an entire class of data errors and ~250 hours of manual work per month — and consolidated our metrics into a single source of truth behind role-based and exec-facing reporting.
- **Workflows worth automating, seen through end to end:** I shipped a fully automated pipeline that turns client meetings into LLM-extracted summaries and auto-assigned tasks, replacing manual coordination entirely; and when a 5,000-person event's manual tier-verification process generated a 3,000-record backlog and 20+ support tickets, I automated it with webhooks and API feeds — check-in went from 4 hours to 20 minutes and that ticket category disappeared.
- **Intake and prioritization users trust:** I handle 10–30 tool and data requests a day and run recurring-issue reviews that feed the roadmap. When 5 of 30 users filed the same reporting request, I shipped self-serve report editing and drove that request category to zero.

I ship lightweight fixes directly — SQL, webhooks, AI-assisted coding — and write engineering-ready specs for what needs a real build; I've made that call explicitly (prototyped a heavy LLM+RAG approach for two weeks, then chose a lightweight design that account managers actually adopted). One of my exec tools is open-sourced at github.com/bellehe01/lark-daily-digest if you'd like to see how I work.

I'm based in San Francisco and glad to be in the Fremont St office four days a week. I'd love to talk.

Best,

Belle He
